| Attribute | Description | Examples |
| :--- | :--- | :--- |
| Type | The base type of the room | Room, Suite, Apartment, Villa |
| Class | A class assigned to the room | Standard, Deluxe, Superior, Poolside, <br> Oceanfront |
| View | A view assigned to the room | Ocean, Pool, Garden, Strip, Burj Khalifa, <br> Mountain |
| Feature | A feature assigned to the room | Private Pool, Balcony, Terrace, Hot Tub |
| RoomCount | The number of bedrooms | One! (etc.) |
| Accessible | Whether the room has some <br> accessibility options | Initially we will just flag if a room has <br> accessible features, but it is planned to <br> provide full details in a later phase e.g. <br> Roll In Shower, Hearing Accessible |
| SharedFacilities | Whether the room has shared facilities | For hostels and lower class hotels |
| NonRefundable | Whether the room is non-refundable* | When included in the room name - 98\% <br> of the time this is included as a separate <br> tag in the Availability Response from <br> suppliers |
| Annex | Whether the room is in an annex | Rare but usually of a lower standard than <br> the main hotel building |

The Group Name is built from these elements depending on which are included in the original supplier room name. The Bed Types are also included in the Group Name but not included in the Attributes due to the way they are stored.

So the Group Name will always be in the format:

Number of Bedrooms, Room Class, Bed Types(s), Room Type, View, (with) Features
Also the following elements can be included within your profile as required (non-refundable) / (annex) / (shared facilities) / (accessible) - when present

So for example:

2 Bedroom Deluxe Triple Suite (Ocean View) with Balcony (accessible)
or
Standard Double or Twin (Pool or Garden View

Finally a suggestion for how this could be effectively presented on the website:

## From this:

## To this:

## Benefits

- More product
- Cleaner display
- Better usability
- Standardised naming
